

**WHEN RESTORATION NEEDS SUPERHEROES,
MEYER'S DYNAMIC DUO ANSWERS THE CALL!**

DYNAMIC DUO

When disaster strikes, restoration heroes step in to help with the clean-up. But how do restoration heroes become superheroes? Simple...with Meyer's Dynamic Duo, the Vantage-Vac® insulation removal vacuum and the Model 220 insulation blowing machine. This duo is always there when you need them. Easy to transport in a van, truck, or SUV, they go and can be anywhere at a moments notice, just like any superhero duo. No matter how large the disaster, the Dynamic Duo steps up to save you time, money and not to mention the day!

REMOVE INSULATION

The Vantage-Vac is a highly portable, yet powerful gas powered insulation removal vacuum. Whether the insulation is wet, fire damaged, smoke damaged or contains non-hazardous mold; the Vantage-Vac has power to spare to handle even the most difficult insulation removal jobs. Its compact, two-wheeled design allows for close placement to the removal area, resulting in shorter hoses and reserving the power of the Vantage-Vac to efficiently move hard-to-handle material. The outlet can be configured to discharge directly into a reusable or disposable collection bag, or a Dumpster™ or roll-off.

RE-INSULATE

The Model 220 insulation blowing machine is a simple, versatile and portable alternative for the professional restoration contractor. Capable of blowing fiberglass and cellulose, the 220 provides exceptional production and coverage in a portable machine at a reasonable price, getting you out of the attic in a fraction of the time. The high capacity plastic hopper can be easily removed for rotor seal inspection and replacement. Designed from decades of experience building contractor grade machinery for all types of insulation materials, the Model 220 offers excellent portability due to a rugged, yet lightweight construction allowing it to be transported effortlessly in a car, SUV, truck or van.
